

FALL DETECTOR PENDANTS INFORMATION SHEET

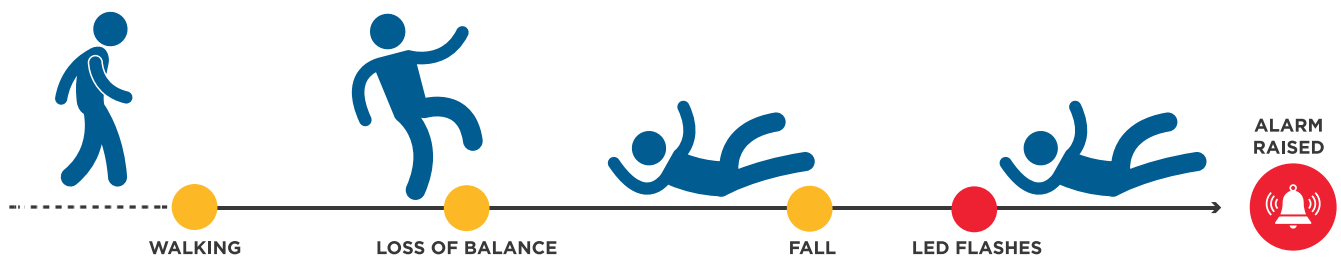

WHAT IS AN INTELLIGENT FALL PENDANT?

An intelligent fall pendant is a small, lightweight device which will automatically detect if the wearer has fallen and raise an alarm call for help, via a paired medical alarm unit. The pendant also provides the wearer with a means of manually calling for help from anywhere in their home 24 hours a day.

HOW DOES IT WORK?

The fall pendant will automatically raise an alert if it senses the user has fallen, raising a call to the monitoring centre.

The fall detector can also be manually activated by the wearer at any time, and cancelled in the event of a false activation.

WHO IS IT FOR?

Our intelligent fall pendants are ideal for:

- People with limited mobility
 - Older people
 - People with disabilities
 - Individuals who have been discharged from hospital and require additional support
 - People working alone
 - People with medical conditions such as epilepsy or diabetes
- Wearing options
- Neck cord: with safety break links and adjustable length.
